

Submission Worksheet

Submission Data

Course: IT202-450-M2025

Assignment: IT202 Module 4 SQL Challenge

Student: Matt T. (mt85)

Status: Submitted | **Worksheet Progress:** 44%

Potential Grade: 5.00/10.00 (50.00%)

Received Grade: 0.00/10.00 (0.00%)

Started: 6/16/2025 12:53:40 AM

Updated: 6/16/2025 1:04:51 AM

View Link: <https://learn.ethereallab.app/assignment/v3/IT202-450-M2025/it202-module-4-sql-challenge/view/mt85>

Instructions

1. Ensure you read all instructions and objectives before starting.
2. Create a new branch from dev called M4-Homework
 1. `git checkout dev` (ensure proper starting branch)
 2. `git pull origin dev` (ensure history is up to date)
 3. `git checkout -b M4-Homework` (create and switch to branch)
3. Copy the template code from here: [GitHub Repository - M4 Homework](#)
 - Put all into an M4 folder inside your `public_html`
 - Expected files
 - `sql/000_create_table_todos.sql`
 - `sql/init_db.php`
 - `todos/create.php`
 - `todos/pending.php`
 - `todos/completed.php`
 - `nav.php`
 - Immediately record to history
 - `git add public_html`
 - `git commit -m "adding M4 HW baseline files"`
 - `git push origin M4-Homework`
 - Create a Pull Request from M4-Homework to dev and keep it open
4. Fill out the below worksheet
 - Each Problem requires the following as you work
 - Ensure there's a comment with your UCID, date, and brief summary of how the problem was solved
 - Update `ucid` in `nav.php` where noted
 - Code solution (add/commit periodically as needed) (refer to comments in the create, pending, completed files)
5. Once finished, click "Submit and Export"
6. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github

1. git add .
2. git commit -m "adding PDF"
3. git push origin M4-Homework
4. On Github merge the pull request from M4-Homework to dev
5. On Github create a pull request from dev to prod and immediately merge. (This will trigger the prod deploy to make the heroku prod links work)
7. Upload the same PDF to Canvas
8. Sync Local
 1. git checkout dev
 2. git pull origin dev

Section #1: (1 pt.) Prep

Progress: 100%

Details:

Once the files are copied in, run your local PHP server and visit `/M4/sql/init_db.php` in the browser to trigger the table generation.

Task #1 (0.50 pts.) - Show the output of the init_db.php tool

Progress: 100%

Details:

The output should note either successfully executed or skipped (if you ran this already)

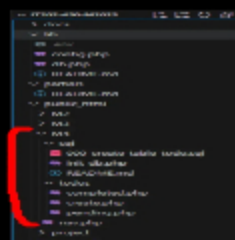

table generated

Saved: 6/16/2025 1:02:59 AM

Task #2 (0.50 pts.) - Show the project view of your editor to show all files are present

Progress: 100%

showing required files

Saved: 6/16/2025 12:53:52 AM

Section #2: (3 pts.) Create Page

Progress: 100%

Task #1 (0.75 pts.) - HTML Form Challenge

Progress: 100%

Part 1:

Progress: 100%

Details:

Show the code snippet related to the completed HTML form

```
57 <body>
58 <?php require_once(__DIR__ . '/../nav.php'); ?>
59 <section>
60 <h2>Create ToDo </h2>
61 <form>
62 <!-- design the form with proper labels and input fields with the correct types based on the SQL table.
63      Wrap each label/input pair in a div tag.
64      For "Assigned" ensure the default value is "self". -->
65 <div>
66 <input type="submit" />
67 </div>
68 </form>
69 </section>
70 </body>
71 </body>
72 </html>
```

solved form

Saved: 6/16/2025 1:03:28 AM

Part 2:

Progress: 100%

Details:

Items

- Note the field names and why the specific types were chosen
- Also note how you made "self" the default for the assigned input

Your Response:

abc

Saved: 6/16/2025 1:03:28 AM

Task #2 (0.75 pts.) - Form Submission PHP Validations

Progress: 100%

Part 1:

Progress: 100%

Details:

- Validate the incoming data for correct format based on the SQL table definition.
- When not valid, provide a user-friendly message of what specifically was wrong and set `$is_valid` to false
- Assigned should check for "self" if a valid format/value isn't provided; it should default to "self" if all checks for this property fail
- Include screenshot(s) from Heroku Dev demonstrating each validation (ensure URL is visible)

```
12 $task = $_GET["task"];
13 $due = $_GET["due"]; //hint: must be a valid MySQL date format
14 $assigned = $_GET["assigned"]; // Must be "self" or a valid format (not empty or equivalent)
15
16 $is_valid = true;
17 // TODO: Validate the incoming data for correct format based on the SQL table definition.
18 // When not valid, provide a user-friendly message of what specifically was wrong and set $is_valid to false.
19 // Assigned should check for "self" if a valid format/value isn't provided.
20 // Start validations
21 // can edit here
22 // End validations
23
24
```

validations

 Saved: 6/16/2025 1:03:47 AM

Part 2:

Progress: 100%

Details:

Briefly explain your validation logic.

Your Response:

abc

 Saved: 6/16/2025 1:03:47 AM

Task #3 (0.75 pts.) - Show the code snippet related to the INSERT query

Progress: 100%

Part 1:

Progress: 100%

Details:

Design a query to insert the incoming data to the proper columns. Ensure valid and proper PDO named placeholders are used. <https://phpdelusions.net/pdo>

```

30 // ...
31 $query = ""; // edit this
32 $params = []; // Apply the proper PDO placeholder to variable mapping here
33 try {
34     $dbh = getDB();
35     $stmt = $dbh->prepare($query);
36     $r = $stmt->execute($params);
37     if ($r) {
38         echo "Inserted new Todo with id " . $dbh->lastInsertId();
39     } else {
40         echo "Failed to insert";
41     }
42 } catch (PDOException $e) {
43     // extra credit You, 14 minutes ago • baseline m4 hw files ...
44     // check if the exception was related to a unique constraint
45     // provide an appropriate user friendly message for this scenario
46     // Otherwise show the default message below
47     echo "There was an error inserting the record; check the logs (terminal)";
48     error_log("Insert Error: " . var_export($e, true)); // shows in the terminal

```

insert query

 Saved: 6/16/2025 1:04:03 AM

⇒ Part 2:

Progress: 100%

Details:

Briefly describe **how** the query works in plain words.

Your Response:

abc

 Saved: 6/16/2025 1:04:03 AM

≡ Task #4 (+ 1.01 pts.) - Extra Credit: Handle Unique Constraint Errors

Progress: 100%

📄 Part 1:

Progress: 100%

Details:

Show the code related to handling the unique constraint errors and the user-friendly message

```

42 } catch (PDOException $e) {
43     // extra credit You, 14 minutes ago • baseline m4 hw files ...
44     // check if the exception was related to a unique constraint
45     // provide an appropriate user-friendly message for this scenario
46     // Otherwise show the default message below
47     echo "There was an error inserting the record; check the logs (terminal)";
48     error_log("Insert Error: " . var_export($e, true)); // shows in the terminal
49 }
50 } else {
51     error_log("Creation input wasn't valid");
52 }
53 }
54 ?>

```

handling duplicates

 Saved: 6/16/2025 1:04:21 AM

⇒ Part 2:

Progress: 100%

Details:

Briefly explain **how** your code solves the challenge.

Your Response:

abc

Saved: 6/16/2025 1:04:21 AM

Task #5 (0.75 pts.) - Create Page URLs

Progress: 100%

Details:

- Direct link to the file in the homework-related branch from Github (should end in **.php**)
- Direct link to the file on Heroku Prod (Just grab the base prod url and manually enter the path to the file)

Section #3: (3 pts.) Pending Page

Progress: 0%

Task #1 (1 pt.) - Fetching Todos

Progress: 0%

Part 1:

Progress: 0%

Details:

- Refer to the HTML table in the given code and build a query that'll select the columns in the same order as the table from the Todo table
- Cross-reference the HTML table columns with what'd most plausibly match the SQL table, aside from the notes below
- For the Status part, you'll need to calculate the "days_offset" from the due date, ensure the

virtual column matches "days_offset"

- For Actions, this isn't part of the query, and there's nothing special to select for it
- Filter the results where the todo item is NOT completed and order the results by those due soonest
- No limit is required
- Include screenshot(s) from Heroku Dev demonstrating 5 different records (ensure URL is visible)

≡ Task #2 (1 pt.) - Completing ToDos

Progress: 0%

🖼 Part 1:

Progress: 0%

Details:

- Create a query that'll update the respective ToDo, marking it complete and setting the date for the completed date field as today
- Ensure the "id" is utilized using proper PDO named placeholders so that only the one item is updated
- Add an extra clause to update only if the complete field of the record is not set

Section #4: (2 pts.) Completed Page

Progress: 0%

≡ Task #1 (1 pt.) - Fetching Todos

Progress: 0%

📄 Part 1:

Progress: 0%

Details:

- Refer to the HTML table below and build a query that'll select the columns in the same order as the table from the Todo table

- Cross-reference the HTML table columns with what'd most plausibly match the SQL table, aside from the notes below
- For the completed date, you'll need to extract the date portion from the completed column
- For the Status part, you'll need to calculate the "days_offset" from the completed date, ensure the virtual column matches "days_offset"
- Filter the results where the todo item is completed and order the results by most recently completed and most recently due
- No limit is required
- Include screenshot(s) from Heroku Dev demonstrating 5 different records (ensure URL is visible)
